DEADLINES FOR ADVERTISING
Spring Issue – 12/10/07;
Summer Issue – 3/10/07;
Autumn Issue – 6/10/07;
Winter Issue – 9/10/07

Be sure to visit our website at: www.bonsai-bsf.com

Along with Cheng we have many other talented artists to round out this convention, all of whom I am sure you will enjoy. We have included Florida’s own Ed Trout in a spectacular Bougainvillea workshop and a Bring Your Own Tree workshop. Mike Rogers will present a Shimpaku Juniper workshop, Toby Diaz will do two workshops: one with Shohin Neea buxifolia, and a second with large old Ficus nerifolia.

Other artists who will be traveling to us are Sean Smith from Pennsylvania doing both a Daiza Carving workshop and Tool Sharpening workshop. These will be hands-on programs, and details will follow in subsequent newsletters. Gustavo Bures from Puerto Rico will be conducting a workshop with Bucida spinosa, a tree native to his homeland. The material is again world-class and we searched long and hard to make sure it was worthy of these artists. We continue to strive for the finest quality material to make our members proud when leaving their workshops.

We have added another feature to this year’s program, which is the addition of several all-day workshops with the artists. This was done to insure that everyone has ample time to complete their project with the artist, and the full design is worked into the tree before the sessions are over. With the use of such challenging material, you will need more time to complete the work, so please notice that many of the workshops are full-day programs giving you an enjoyable learning session and ample time to complete your bonsai. They are listed on the schedule of the registration form as Part 1 & Part 2. Please take notice of these. More details will be included in the newsletters that follow.

As you now know, much work has been going on behind the scenes to put this event together. We want to make the convention a great learning experience. Please read your newsletters and if you have any questions, please feel free to e-mail the convention team.
Pemphis acidula – A Tropical Classic

Possessing intricate branch patterns and rich shari, *Pemphis acidula* is an excellent subject for bonsai creation. To my knowledge, it is a volunteer native species that grows among rocky crevices along the coast. Its natural habitat is distributed from the region of southern Malaysia to Okinawa. Influenced by the climate, the species that grows in Taiwan has hard trunks with small leaves. However, the natural occurring specimens that grow in the Philippines have stronger character and bigger leaves. The former case is suitable for compact-to-medium bonsai cultivation but the later one is more suitable for large scale bonsai. As both the Philippines and Taiwan are often attacked by typhoons during summer, the trunks of *Pemphis acidula* always have a tortuously-wavy character.

Recently, cases of failure when cultivating *Pemphis* have been frequent and common in Taiwan. The main problem resides on serious leaf fall and branch loss during winter months. As a result, many horticulturists thus conclude that *Pemphis acidula* cannot endure cold weather. In fact, *Pemphis acidula* can withstand a cold winter, but is indeed sensitive to sudden temperature changes. The following facts will evidence their cold hardiness:

1. Okinawa is also one of the native regions of *Pemphis acidula*. It is located at a higher latitude, where the climate is a lot colder than Taiwan.

2. If low temperature were a determining factor, *Pemphis acidula* would not grow naturally enduring the sea breeze of Okinawa’s rock-faced coast.

So, *Pemphis acidula* is able to withstand cold winter (at least in the subtropics) if proper cultivation is provided.

What is the proper cultivation? It is a well accepted notion that it’s a good practice to emulate the original environment conditions of each species, as close as possible, in order to cultivate healthy trees. Only with strong, healthy material the aim of artistic creation can be achieved. If one has a chance to observe natural occurring *Pemphis Acidula* (as can be seen in Figure 1) you will notice that they grow on spots where both sea tide and sea breeze reach. Seawater serves as a water source on one hand and eliminates the frost harm in winter on the other. Figure 2 shows that their twisted roots simply cover coarse rocks or coral reefs!

According to these observations, we know *Pemphis acidula* prefer to grow on places with good air ventilation and need lots of salt water and fertilizer. In addition, it’s roots like to breathe freely.
Tropical Bonsai – Nashia inaguensis

Dr. Popenoe, a former director of Fairchild Tropical Botanic Garden, was the first to recognize *Nashia inaguensis* as a potential bonsai subject. He pointed it out to me during a Fairchild distribution day back in the 80s. He was right...woody trunk, small leaves, tiny flowers and fruit, fast growing, and fragrant too!

In its natural habitat the shrub is rangy. The secondary branches appear in whorls and shoot out long and straight. A full-grown *Nashia*, with ideal growing conditions, reaches about 7–8 feet in height. Fully matured in the ground, the trunk develops to 2–3” in diameter.

The leaves (approximately \(\frac{1}{4}\)” in length) when brushed or touched exude a delightful, spicy aroma. The flowers are even smaller than the leaves, white and very close set in groups on the branch. The flowers attract many pollinators, especially the Atala butterfly. Fruit of the Bahama berry is smaller still and develops in tiny orange to reddish-orange bead-like clusters.

**Sweet Nashia**

Most people know *Nashia inaguensis* has fragrant leaves. Just brush lightly and they give a pleasant herbal aroma. During a particularly heavy blooming of my Nashia bonsai, I noticed a stronger, sweeter smell. It was the clusters of tiny flowers. Two scents on one tree, what a prize!

**Nashia as Bonsai**

This is a tropical plant with excellent potential as a shohin bonsai. The trunk of *Nashia inaguensis* acquires an almost fluted, old look very quickly. Rootage at ground level is consistently abundant and adds to the aged appearance. It does not develop a trunk very quickly in a small container. For best results grow it for girth first.

The fast growing angular development is ideal for training in the clip-and-grow manner. Wire can be used to add movement to otherwise linear branches. The mature plant has very hard wood.

When removing an unwanted branch, consider breaking it and cautiously tearing a shari rather than using a concave cutter. The results are very natural looking.

During the growing season development is rampant, sprouts appear on the trunk as well as on branches. To keep an established Bahama Berry bonsai looking good...prune, prune, prune.

**Location and Water**

*Nashia* is a true tropical, not a sub-tropical plant. It demands sun, heat, humidity, water and good air circulation. Meeting these needs can paradoxically create a bit of a problem as a bonsai. Full sun and good air circulation, where it is most happy, can cause this plant to dry out very quickly; primarily because the...
Your passion is growing. You're ready for Kiku tools.

Your skill is increasing. Your artistry is reaching new levels. The time has come to invest in the right tools to help your bonsai look even better.

Purchasing Kiku tools means getting time-honored Japanese craftsmanship that will only increase your artistry and success.

Kiku... Since 1962, your source for quality Japanese tools.

At the 2007 convention, we wanted to set a new standard for the quality of the workshop material being offered. We wanted to provide quality workshop trees at a reasonable price, and judging by the fact the 100% of the workshops were sold out, I think we accomplished that goal. If there was a complaint, it was that there wasn’t enough time to work on the material using the advanced techniques that we were encouraging people to learn and use in the workshops. I think that you will see that we addressed this problem in 2008, so please read on!

The theme of the 2008 convention is called “Si Diao” bonsai, which means silk thread carving and was created by our headlining artist Cheng Cheng-Kung from Taiwan. Another of our guest artists is our friend Sean Smith from Pennsylvania who is world-renowned for his daiza carving abilities. Since we have so much talent in carving at this convention, we thought it only fit to provide our members with some material worthy of carving.

Our first workshop dedicated to carving will be on *Podocarpus macrophylla* and will be conducted by Cheng. These *Podocarpus* are unlike anything you have ever seen in a convention workshop before. They are big. We were fortunate to get these large *Podocarpus* from our friend Robert Pinder at Dragon Tree Bonsai in Palm City. If you haven’t been there, you are truly missing out on some spectacular material. These *Podocarpus* are just screaming to be carved, so with the guidance of Cheng, that’s what you are going to do. You may ask, how can we carve such large trees in three hours, to which I answer, you can’t. So, you have a full day to carve to your hearts content, and I don’t mean two–tree hour sessions, I mean a full day – eight hours!

Our second workshop is with one of Florida’s favorite artists, Ed Trout. For Ed, we decided to get some *Bougainvillea glabra*, and being that this convention’s theme is carving, it just wouldn’t be appropriate to give Ed trees that weren’t worthy of carving. So, thanks to our friend Erik Wigert of Wigert’s Bonsai Nursery in Bokeelia, we have extra large *Bougainvillea* for you to work on. We brought several people over to Ed’s house to take pictures of them, and I swear their jaws hit the ground when they saw the trees. Its really nice to have people tell you to sign them up for the workshop without knowing the price. Oh, nearly forgot to mention that this workshop goes all day too! And I do mean all day – eight hours!!

Our third workshop, builds on what we learned from David DeGroot at the 2007 convention and that is how to care for our tools. Sean Smith will be conducting a four-hour workshop on how

Bonsai by Dura-Stone

Dura-Stone Nursery was started as a wholesale nursery specializing in landscape plants, cacti and bonsai. As the demand for bonsai and prebonsai increased we decided to discontinue the landscape and cactus plants.

We are now a full-service bonsai nursery specializing in tropical plants. We carry several lines of bonsai pots, tools, wire and soil. Our prebonsai are all trained for bonsai with low branches and heavy trunks. The finished bonsai are in all sizes from mame to very large.

The nursery is open to the public Monday–Friday from 8–5 or by appointment.

The nursery is open to the public the fourth Sunday of each month, weather permitting, for a free workshop. You may bring your own plants, purchase from the nursery or just come to visit. Jim Smith, Jim Van Landingham, Doug Smith or one of the other regular visitors is always willing to help you.

We wholesale to bonsai dealers throughout the country and internationally; we will ship any way you choose.
